

Angled Door Protection Post

Our Galvanised Angled Door Post has been designed to protect the back of house doorways which are in constant use, from being unhinged with deliveries going to and from the shop floor. With its construction of heavy-duty steel, it provides the most complete and durable protection for the edges of open doors. It also has the added advantage of being floor fixed for security but strategically positioned so the door can be closed once all deliveries have been received.

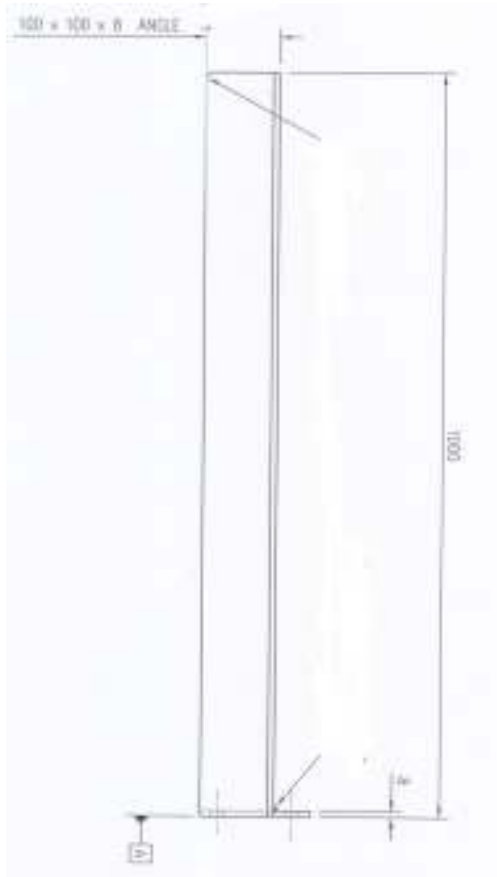

This 1000mm high post is ideal for areas in heavy use by forklifts or roll cages and prevents costly collision damage.

Each post weighs 14 kg and is mounted on a sturdy 150mm x 150mm base plate.

Standard and optional features;

Design:

- 1000mm high
- 150mm x 150mm base plate
- Fixed using standard expandable rawlshields and bolts
- Mild steel, fully galvanised
