

Corner Protectors

Corner Protectors provide the ultimate protection for vulnerable corners with the added benefit of being aesthetically pleasing.

Manufactured from either aluminium or stainless steel, it is quick and easy to install and perfect for protecting corners from impact damage by either vehicular, trolley or pedestrian traffic.

Corner Protectors are the perfect compliment to the other types of internal damage protection we have within our range. It comes as standard in 5m lengths but can be cut to any size to suit specific environmental requirements. We recommend that a minimum length of 1m is acknowledged due to actual height of trolleys, vehicular traffic it has been installed to protect against.

Our stainless steel corner protector is ideal for locations where hygiene is of the utmost importance like Bakery areas of a store.

Standard and optional features;

Design:

- The rails come in standard lengths of 5m - and can be cut to any length to suit requirements
- Manufactured from aluminium or stainless steel
