

Double D Rubber

High impact bump and protection rails from the ITABmk Prorad range offers effective protection for surfaces against impact and collisions.

Manufactured entirely from rubber, our Double D bump rail is durable and absorbs collision from both vehicular and pedestrian traffic. Therefore making the perfect protection solution for a multitude of environments, like wall protection in supermarkets, airports, hospitals and hotels

Our Double D bump rail gives unsurpassed protection for a variety of locations within general industry. It will reduce the risk of accidents and help protect exposed flat or curved surfaces. Designed to absorb impact damage in loading bays, service areas and car parks. The solid rubber buffer is pre-drilled for concealed fixings at 500mm centres to accommodate the anchor bolts and reduce the risk of accidental damage. Typically used in frozen coldrooms, Double D is completely resilient to extremes of temperature and resists effectively high impact situations.

The rubber rail has the added option of being mounted onto an aluminium backing which is attached to a wall with self drilling screws to enhance strength/resistance. Double D is suitable for both internal or external use.

Standard and optional features;

Design:

- 100% Rubber
- Can be used for both internal & external purposes
- Optional aluminium backing for added strength & resistance
- Standard length - 9m coils but can be cut to any desired length
- Can be fitted to any surface

Order Information

Available supply only or fully installed
