

High Visibility Floor Bump

Manufactured entirely from a hard wearing PVC, with a non slip surface, Radford's floor bump is durable and absorbs collision from both vehicular and pedestrian traffic. High visibility floor bump from the Radford range offers an excellent solution for demarcation purposes whether this be for a warehouse walkway indicating to the user the edge of the safety zone, foot traffic to avoid hazardous areas or for holding trolleys within a trolley shelter/park.

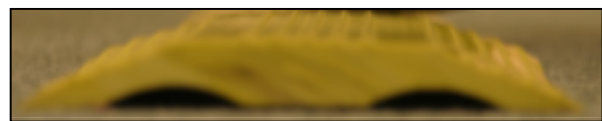

The moulded tactile non slip surface is 15mm high and is installed using self driven anchor bolts which are used to fix securely on to concrete/tarmac floors. It has pre drilled holes and is manufactured in the correct bright yellow hazard warning colour, promoting extra visibility/contrast for additional safety. When in position, the anchor bolts are concealed below the surface.

Our high visibility floor bump can also be wall mounted to offer protection of property against accidental damage from warehouse/back of house traffic. Our floor bump is available in lengths of 2m and is a complete and versatile demarcation solution.

Standard and optional features:

Design:

- Length 2m, depth 15mm, width 140mm
- Standard Hazard Warning Colour - bright yellow
- Ideal for straight runs
- Can be floor or wall mounted
