

Mobile Trolley Parks

Our mobile trolley parks provide the perfect, low-cost solution to flexible trolley storage. Mounted on lockable castors the parks can be easily re-located either internally or externally, providing a superb level of versatility to meet your individual needs.

We manufacture a stainless steel which is very highly robust, being able to withstand constant use and adverse weather conditions. The arms are finished with rounded inserts, completing an aesthetically pleasing design. Our stainless steel version is more stylish and prestigious looking than its galvanised counterpart and purveys an image of greater opulence.

Generously proportioned our mobile trolley bay is 2m in length, allowing for storage of approximately 10 standard trolleys and removes the need for any kind of planning permission.
