

## ProRad Rigi (25/50)

High impact bump and protection rails from the Radford Prorad range offers effective protection for surfaces against impact and collisions. Manufactured entirely from PVC, our Prorad range of bump rails are durable and absorb collision from both vehicular and pedestrian traffic. Therefore making the perfect protection solution for a multitude of environments.

Manufactured using Vinylac with injection molded stop-ends and corners, ProRad will last for years. It absorbs impact through a combination of facing rail, internal web meshing and rubber spacers.

Our ProRad Rigi is the standard wall/column protection solution for straight runs and 90° angles. ProRad Rigi is used widely throughout retail and is also suitable for a broad range of other installations where surface protection is required including airports, hospitals and hotels. It is highly configurable and simple to install with an option of nominal 25mm or 50mm width to suit requirements. The plastic backing rail is secured firmly to the wall using screws & plugs then Rigi is clipped into place.

Introducing a wall protection system doesn't have to mean compromising on design. ProRad Rigi & Flexi rails combine function and flair to give optimum protection without being obtrusive. ProRad Rigi and Flexi are easily interchangeable making this system not only designer friendly but cost effective too. ProRad flexi bends to accommodate curved surfaces and corners, making it ideal for those areas where traditional protection systems just won't work.

Standard and optional features:

**Design:**

- Widths available: nominal 25mm (1 inch) or 50mm (2 inch)
- Standard colours are light grey, dark grey or black. Other colours are available on request
- Plastic backing rail fixed to surface using screws & plugs, Rigi clips into place concealing backing rail
