

TGR®

TGR® protection rail is a tough, low-level protection system for internal use only. Consisting of a modern styled rail with smooth flexible rubber insert with adjustable TGR® flex feet to absorb and dissipate impact energy.

Our TGR® protection rail has many applications for protecting property, equipment, walls and columns from low speed impacts from typical environmental hazards that are experienced internally in the front of house and reduce the risk of accidental damage. With its streamline and modular design TGR®, is the ideal solution for robust & practical protection combined with being aesthetically pleasing. Trolleys of all types and sizes reversing and maneuvering around stores can cause damage to walls, columns and equipment.

A modular system of parts makes for easy planning, installation and maintenance. Available as a floor mounted, wall mounted or removable (de-mountable) system, TGR® is perfect for protecting columns, window elevations, walls and refrigeration cabinets.

A TGR corner foot is now available to offer cleaner lines for columns and corners and reduces the number of feet required for column protection.

Standard and optional features;

Design:

➤ Aluminium extrusion silver anodised with impact absorbent rubber insert which is available in light grey, dark grey and black as standard - other colours are available on request
